Skills

Swift
SwiftUI
CoreData
CreateML
UI Design
OOP
Python
TensorFlow
Pandas
NumPy
SQL

Attributes

Diligent
Ambitious
Curious
Cooperative
Passionate
Humorous
Open-minded

Languages

Mandarin (fluent)
English (fluent)
Polish (native)
Japanese (basic)
French (basic)

About Me

Email: mikolaj.a.witkowski@gmail.com
Phone: +48515247989
Location: Warsaw, Poland

Creating functionality-driven, easy to navigate and pleasant to the eye apps with the iOS SDK has been the best thing I got to work on ever since starting my programming career a couple of years back.

Developing the Apple ecosystem software fulfils my need of helping others through creating applications that facilitate their day-to-day activities and solve their problems. Programming is also a way for me to challenge myself and is an exhaust for my inner need of creative expression.

Apart from programming I also really enjoy reading about science, playing the piano and electric guitar and learning new things.

Goals

My dream job would be working remotely in a team of wonderful people who boost each other's morale while striving to achieve a common goal.

I am open to any kinds of projects, my favourite being AI-related ones. With Apple Glass coming in the nearest future and the capability of current Apple devices, I believe the applications of AI software are endless!

The thing I value the most about software engineering is the endless possibilities for development. I would love to learn from more experienced engineers as well as listen to their insights on writing better, cleaner code.

Education

Although I come from a non-CS background, I find the experiences both from my bachelor's in Sinology and master's in International Business very valuable in programming. Knowing mandarin allows me to connect with a broader range of developers, whereas strategic planning makes it easier for me to come up with ideas and structure projects.

Besides having studied at National Taiwan University, University of Warsaw and National Sun Yat-Sen University, I also try to educate myself daily through watching tutorials, educational videos and conferences.
